Patient Name:	ELLIS, RUDEN	Patient ID:	12541
Referring Physician:	Han, Seo M.D.	Date of Birth:	06/10/1962
Date of Study:	09/16/2019 2:30 PM	Gender:	M
Procedure:	CT KNEE RT W/O CONTRAST	Age:	57

CT OF THE RIGHT KNEE WITHOUT CONTRAST

INDICATION: Pain.

TECHNIQUE: Contiguous axial CT images were obtained without IV contrast. Coronal and sagittal 2D reformatted images were also performed. Dose modulation, iterative reconstruction, and/or weight-based dosing when appropriate are used to reduce radiation dose to as low as reasonably achievable. Standard nomenclature is used for dose index registry submission.

COMPARISON: No prior studies were available for comparison at the time of dictation.

FINDINGS: No fracture. Tricompartmental joint narrowing. Small osteophytes within the intercondylar notch. No effusion. No fluid collection or mass. Quadriceps and patellar tendons are normal in size. Quadriceps enthesopathy.

IMPRESSION:

No fracture. Tricompartmental joint narrowing. Small osteophytes at a minimum intercondylar notch.

Electronically Signed by: PRIYESH PATEL M.D.
